

Boilerexams Article Template - Title

Introductory text (100 - 200 words)

Provide a brief overview of the deep dive you're about to go into, including its motivation and significance. Set the reader in a story-like setting if that makes sense.

Dataset manipulation (100-150 words)

Talk about what you did with your dataset and what features you used. *Explain why you did what you did.*

Also talk about how you got your data: What does Boilerexams collect, if you created any features, what were they, and what does your final dataset generally look like?.

Methods (probably under 400 words idk)

Describe and justify the analytical approach. Include equations where necessary. I personally use inline latex in the Obsidian app but feel free to use whatever.

```
\textbf{Metric 1} = \frac{\text{Some Value}}{\text{Another Value}}
```

blah blah some equation $e = mc^2$

Findings (50-200 words)

Give key results with plots and tables. Make sure they are properly formatted and centered.

Conclusions (up to 200 words).

Summarize the findings and their significance. Explain significance of the findings. Explain how they can be applied or what their implications are (positive or negative).

Next Steps (50 words)

Talk about potential future work or improvements that could be made based on this study.
